TrakCel Launches Cell Therapy Partner Services Ecosystem

“Connected Services” programme will synergize essential specialists for world-leading supply chain excellence

CARDIFF, WALES, UK November 5, 2015 – TrakCel Ltd., a pioneer in cell therapy process management and supply chain integration technology, today announces its 'Connected Services' programme, a partner services ecosystem to synergize the organizations that provide essential functions in cell therapy treatments.

'Connected Services' will deliver a "single pane of glass" vision giving real-time visibility of the entire Cell Therapy supply chain through one platform which is technically and operationally associated with world-leading cell therapy supply chain contributing organizations.

The aim of the Connected Services partner services ecosystem is to accelerate cell therapy success by enhancing TrakCel's platform with links to participant firms that specialize in logistics, cell therapy manufacturing, patient treatment, storage, compliance and other essential tasks in the supply chain.

Jon Curley, Chief Technology Officer and spokesperson for the Connected Services programme said: "The complexity of autologous cell therapies demands a "connected services" experience with real integration across the supply chain. Synchronizing operations and information flow is critical - and no one player can do it all. The solution lies in strong partnerships, working together and weaving individual capabilities into an integrated, elegant, best-of-breed solution."

External companies that participate in the programme will benefit by making their core capabilities in the autologous supply chain more visible and extending business reach into the industry.

"The Connected Services partner services ecosystem maintains our commitment to the pursuit of excellence in supply chain visibility, control and scalability." continued Curley, "Based on industry interest during our research phase, we anticipate announcing the first wave of initial participants in the immediate future."

TrakCel will aim to announce new partners to the programme in Q4 2015 and early 2016.

About TrakCel

TrakCel's cell therapy process management solution improves clinical study efficacy and accelerates product scale-up/scale-out by implementing communications technology to integrate the supply chain from end-to-end. The technology provides interactive instructions to professionals within the cell therapy supply chain and gives stakeholders on-demand visibility of procedural results and chain-of-custody data for immediate traceability, validation and compliance audits. Founded in 2012, TrakCel technology has been adopted by GlaxoSmithKline and other leaders in the cell therapy industry. TrakCel is based in Cardiff, Wales, UK.
